PREFACE

Four countries in Central Europe, with relations in the field of business, science, arts, everyday life, sharing even monarchs in various periods, have constituted a group cooperating at many levels for many centuries. The history of the Visegrád Group dates back to the 14th century, when the leaders of the Central European kingdoms that cover today's countries held a summit in order to resolve international disputes.

The V4 group of modern times was established in Visegrád to promote progress and development in the region. The Czech Republic, Hungary, Poland and Slovakia acceded the European Union in 2004, contributing by more than one tenth of the area and population, nearly 6% of economic performance based on GDP, about 8% of manufacturing of motor vehicles and almost one fifth of main crops produced by 2016.

History of official statistical services dates back to a century or even more in the V4 countries. Preceding the accession to the EU, these statistical offices cooperated – including other candidate countries –, resulting for instance in a quarterly bulletin, published between 1993 and 2004. A strengthened cooperation of the National Statistical Institutes

of the four countries started in 2018 under the Hungarian V4 Presidency, with the aim of creating a platform to discuss specific statistical topics of mutual interest, and to exchange views and best practices of statistical production and the development of methodologies. As the first tangible outcome of our strengthened cooperation the four NSIs publish this booklet on the main indicators of the Visegrád Group countries, covering population and living conditions, education and research, the economic environment, external relations and infrastructure. In this joint publication, put together for the first time to provide an insight into the most important social and economic characteristics of the V4 countries, the similarities and diversities within this block of countries can be observed as well as the weight of the group within the EU. The booklet includes comprehensive, visual information presented in tables and charts. The concept and development of the content are the result of the statistical cooperation between the four countries.

We hope that this information will be useful to our readers.

7 Level of actual individual consumption per capita in purchasing power parity* (EU-28 = 100)

Country	2012	2013	2014	2015	2016
Czech Republic	73	76	78	78	78
Hungary	62	63	62	63	63
Poland	74	74	74	74	74
Slovakia	74	75	76	76	76
EU-28	100	100	100	100	100

* Purchasing power parities (PPPs) are indicators of price level differences across countries. PPPs tell us how many currency units a given quantity of goods and services costs in different countries. PPPs can thus be used as currency conversion rates to convert expenditures expressed in national currencies into an artificial common currency, e.g. the Purchasing Power Standard, PPS), eliminating the effect of price level differences across countries.

EDUCATION AND RESEARCH
