

# Accidents at work in the first half of 2022 – preliminary data

12.09.2022

**1.89**

Incidence rate in the first half of 2022

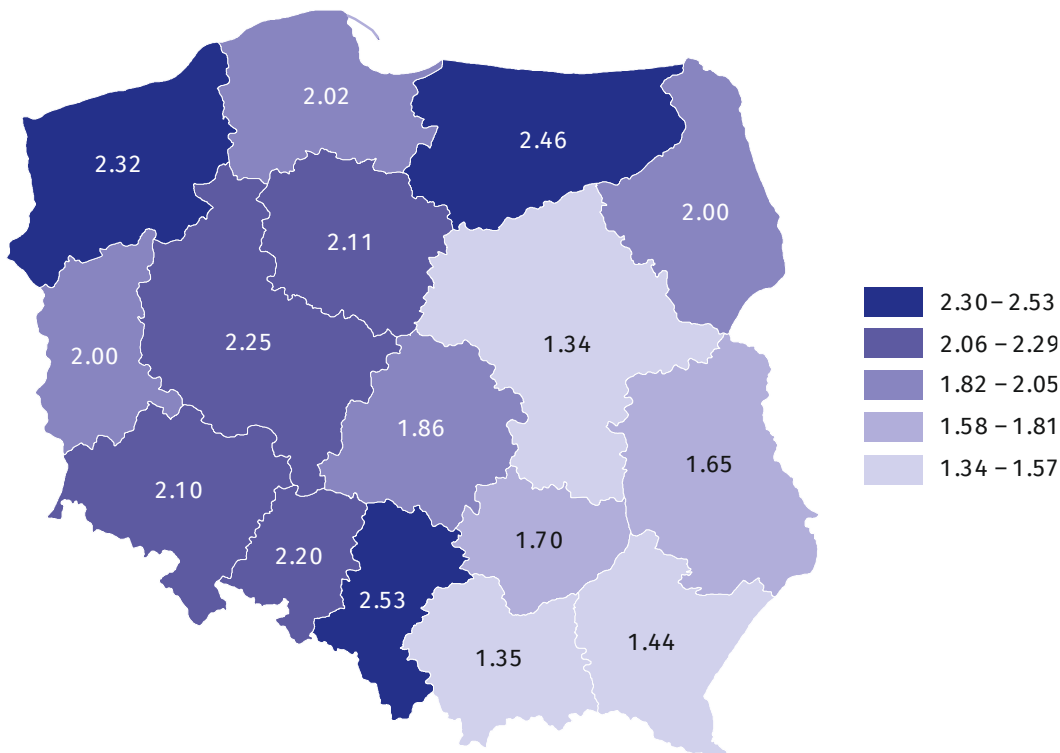

**27,900 persons injured in accidents at work were reported in the first half of 2022, by 2.6% more than in 2021. The number of injured persons per 1,000 employed persons decreased (the incidence rate) from 2.01 in the first half of 2021 to 1.89 in the first half of 2022.**

Fatal accident victims accounted for 0.3% of all persons injured in accidents at work (like in the first half of 2021), while persons injured in serious accidents at work had a 0.5% share (a 0.1 percentage point decrease respectively). The number of persons injured in accidents with other effects increased by 2.8%.

The highest incidence rate was recorded for Śląskie (2.53), Warmińsko-Mazurskie (2.46) and Zachodniopomorskie (2.32) Voivodships, the lowest for Mazowieckie (1.34), Małopolskie (1.35) and Podkarpackie (1.44).

The number of persons injured in accidents at work increased but the incidence rate decreased compared to the first half of 2021

**Map 1. Persons injured in accidents at work per 1,000 employed persons <sup>a</sup> (excluding private farms in agriculture) in the first half of 2022**

The highest incidence rate was recorded for Śląskie Voivodship, while the lowest for Mazowieckie Voivodship

<sup>a</sup> The incidence rate was calculated using preliminary data on the number of employees; civilian employees of budgetary entities conducting activity within the scope of national defence and public safety were not included in the breakdown by voivodships.

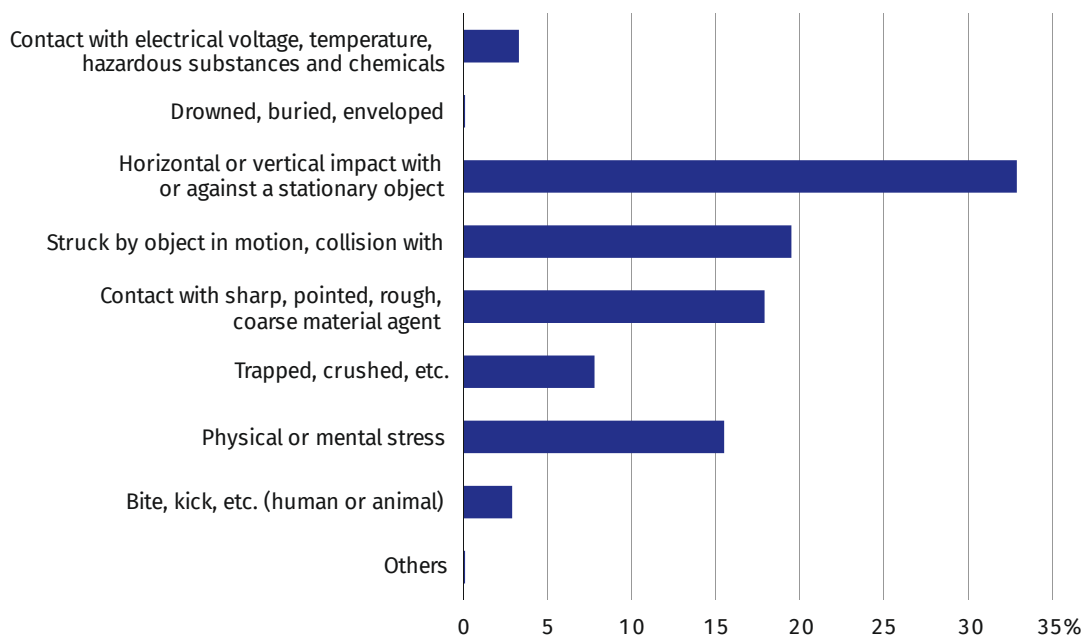

In the breakdown by types of economic activity, the highest incidence rate was recorded in the sections: mining and quarrying (5.87), water supply; sewerage, waste management and remediation activities (4.86) and manufacturing (3.18), while the lowest in the sections: agriculture, forestry and fishing (0.26), information and communication (0.28) and financial and insurance activities (0.42).

**Chart 1. Persons injured in accidents at work per 1,000 employed persons by sections in the first half of 2022 (excluding private farms in agriculture)**

The highest incidence rate was recorded in the section mining and quarrying, the lowest in the section agriculture, forestry and fishing

**Chart 2. Persons injured in accidents at work by contact-modes of injury in the first half of 2022**

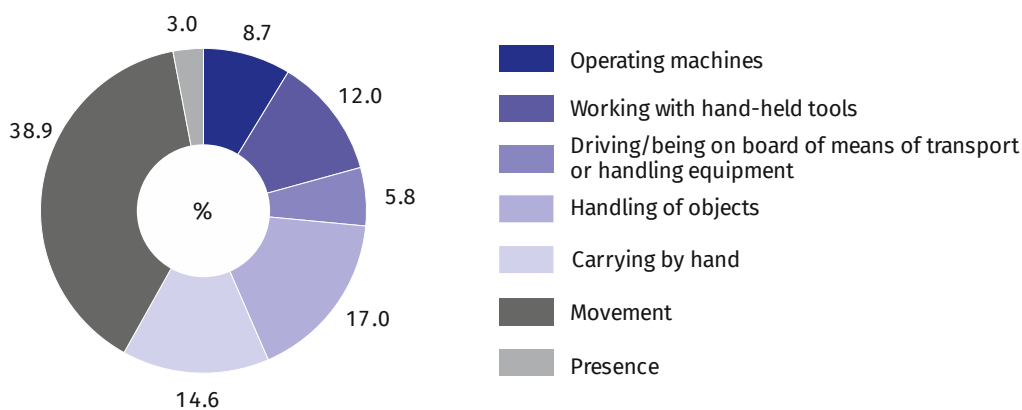

Horizontal or vertical impact with or against a stationary object was the prevalent group of contact-modes of injuries (32.9%)

**Chart 3. Causes of accidents at work in the first half of 2022**

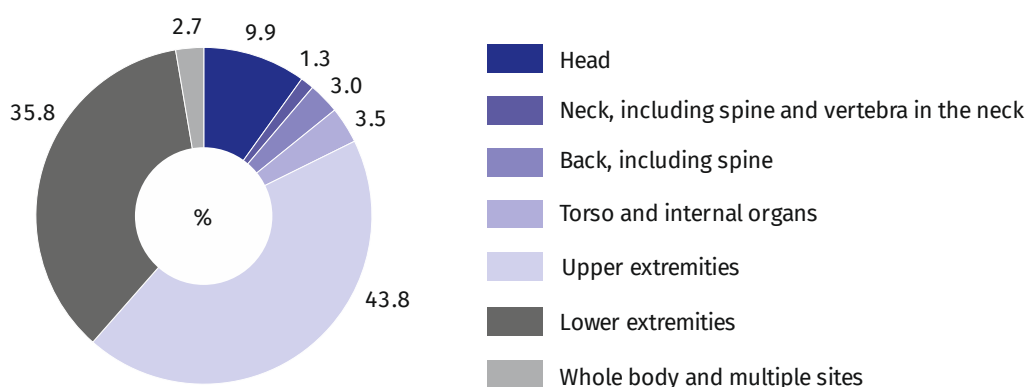

Employee's incorrect action was the cause of 61.1% of the accidents at work

**Chart 4. Persons injured in accidents at work by a specific physical activity performed by the victim at the time of the accident in the first half of 2022**

Movement was the most frequent specific physical activity performed by the victim at the time of the accident (38.9%)

**Chart 5. Persons injured in accidents at work by part of body injured in the first half of 2022**

79.6% of the persons injured in accidents at work sustained an extremity injury

Tables are available on the website in .xlsx format.

## METHODOLOGICAL NOTES

The publication includes information on **accidents at work of persons employed in the national economy** excluding budgetary entities conducting activity within the scope of the national defence and public safety for which information on accidents at work concerns only civilian employees.

Data regarding **accidents at work, excluding private farms in agriculture** are obtained from the "Statistical accident report" Z-KW and cover all accidents at work, as well as accidents considered equivalent to accidents at work, regardless whether incapacity for work was reported (due to hospitalisation of an injured person, or rejection of a sick leave, etc.).

**Data on accidents at work on private farms in agriculture** were compiled on the basis of reports of the Agricultural Social Insurance Fund (ASIF) and are related only to the accidents in respect of which one-off compensations were granted in a given period.

Each accident, regardless whether the victim was injured during a single or multiple casualty incident, is counted as one accident at work.

**Incidence rate** is the number of persons injured per 1,000 persons employed. The ratio was calculated using the average number of employed persons expressed as an arithmetic mean for two dates (as of 31 December of the previous year and 31 June of the current year).

Information on **days lost** includes the total number of calendar days of incapacity for work due to work-related accidents, estimated on the basis of sick leaves.

Pursuant to art. 3 of the Act of 30 October 2002 on Social Insurance in Respect of Accidents at Work and Occupational Diseases (consolidated text Journal of Laws of 2019, item 1205 as amended):

- **accident at work** is understood as a sudden incident, caused by external reason, leading to injury or death, which occurred in connection with work:
  - 1) during or in connection with performance of ordinary activities or the superiors' instructions by the employee and activities on behalf of the employers, even without instructions,
  - 2) when the employee remains at the disposal of the employer on the way between the seat of the employer and the place of performing the obligation arising from the employment relationship;
- every accident is considered **equivalent to an accident at work**, as regards entitlement to benefits defined in the law on social insurance against accidents at work and occupational diseases, if the employee had such an accident: during a business trip; during training within the scope of the national self-defence; when performing tasks ordered by trade union organisations operating at the employer's;
  - **accident at work is also understood** as a sudden incident, causing injury or death, which happened within the term of accident insurance in the course of: practising sports during competitions and training by a person receiving sport scholarship; performance of paid work while serving the sentence of imprisonment or temporary detentions; exercising the Mandate of a Deputy or Senator who receives a salary; doing – on the basis of appointment issued by powiat labour office or other supervising entity – training or internship connected with a scholarship received by school leavers; performance of work by members of agricultural producers' cooperatives, farmers' cooperatives and by other persons considered equivalent to members of cooperative, for the benefit of these cooperatives; performance or cooperation in performance of work on the basis of agency agreements, contracts of mandate or contracts of services; performance of usual activities related to running, or cooperation in running, a non-agricultural economic activity; performance of religious activities or activities connected with entrusted pastoral or monastic functions by clergymen; serving supplementary forms of military service; education of students receiving scholarship at the National School of Public Administration.

**Fatal accident at work** is an accident which leads to the death of a victim at the site of the accident or within 6 months of the accident.

**Serious accident at work** is an accident which results in serious bodily harm, i.e. loss of sight, hearing, speech, ability to procreate, other bodily harm or health-related problems, which disrupts primary bodily functions or results in an incurable and life-threatening disease, permanent mental illness, a permanent, total or significant incapacity for work in the occupation, or a permanent significant disfigurement or distortion of the body.

The methodology of the survey on accidents at work is explained in more detail in the annual publication titled "Accidents at work", available on the website of [Statistics Poland](#).

The data presented in this release are preliminary. The final data covering the year 2022 will be available in a publication coming out in November 2023.
