Protective forests

Definition:

Wood lands which are protected because of their function.

The forests subject to special protection, may be recognized as such, where:

- a) they protect soil from washing away or leaching, or prevent landslides, rockfalls or avalanches;
- b) they protect resources of surface or ground water and/or regulate hydrological relations in a drainage basin or on a divide;
- c) they limit the emergence or spread of mobile sands;
- d) they exist in areas sustaining permanent damage as a result of industrial activity;
- e) stands serve as seed stands, refuges for animals or sites for plants subject to legal protection;
- f) they are of particular natural or scientific significance, or else importance from the point of view of the defence and security of the Polish State; g) they are located:
 - within the administrative limits of towns and cities or within 10 km of the limits of cities of more than 50.000 inhabitants,
 - in the protective zones of health resorts and health-resort protection areas,
 - within the treeline zone.

By virtue of a Decision, the Minister relevant in matters of the environment shall recognise a forest as protective, or deprive a forest of that status, at the behest of the Director-General and following receipt of an opinion from the Council in the given gmina - in respect of forests constituting Treasury property. In respect of other forests - by virtue of a Decision, the Starosta heading a given powiat shall, having reached an agreement with a forest owner and having sought and received the opinion of the relevant Gmina Council, recognise a forest as protective, or deprive a forest of that status.
