

Terms used in official statistics

Decile

Definition:

Quantiles of order $k/10$ for $k = 1, 2, \dots, 9$. For example, the first decile (for statistical data sorted in increasing order) means that 10% of units have features less than or equal to the first decile, and 90% of units have features equal to or greater than the first decile.

Low-level terms:

- Quartiles
