

GENERAL NOTES

Publication contains production data for about 240 products or assortment groups classified in accordance with Polish Classification of Products and Services (PKWiU), introduced 1.01.2009 for use in statistics, recording, documentation and accountancy and in government registers and information systems (the legal act is Rozporządzenie Rady Ministrów z dn. 29 października 2008, Dz. U. Nr 207, poz.1293).

These products are representative for main branches of industrial production.

Production data concerning reference month or so-called cumulative period (from the beginning of the year up to the end of reference month) are collected from industrial goods producers from public and private sector, with 50 or more employees, regardless of the registered main economical activity type. Data cover production of final products presented in physical measurement units, which are intended for sale as well as for further processing in the same enterprise, manufactured by enterprise from its own or supplied raw materials, on the end of reference month.

Moreover, there are presented production dynamics indices with the previous month base and the corresponding month of the previous year base. Indices includes data corrections in previous periods.

Published data could be revised in the next reference periods, but they are not corrected in archival publications.
